

COASTALMISTER™
offers two models.
One is right for You.

On Demand:

Available in 30 gallon units.
Ideal for small applications.
Mists manually or by remote control.

Digital 2 Timer:

Available in 30 or 55 gallon units—larger by special order.
Mists manually or by remote control, as well as automatically at pre-set times each day. The on-off feature of the hand held remote control adds the ability to reduce insecticide/repellant usage depending upon anticipated outdoor activity. Optional agitation feature allows the use of time release insecticides/repellants.

**DON'T LET MOSQUITOES
KEEP YOU INDOORS**

MOSQUITOES ARE MORE THAN A NUISANCE. THEY ARE A HEALTH RISK TO YOU AND YOUR FAMILY.

*But when **they're** out, it doesn't mean **you** have to stay in.*

THE COASTALMISTER™ IS A PROVEN MOSQUITO MANAGEMENT SYSTEM

That:

- Automatically sprays a fine mist of effective Pyrethrum-based insecticide at pre-set times each day
- Kills and repels mosquitoes around pools, patios, porches – even areas as large as your entire yard
- Allows additional “pre-activity” applications on demand by use of a hand-held remote control
- Is professionally installed to become an inconspicuous yet highly effective weapon in the fight against mosquitoes
- Is expandable to accommodate new protection zones as your outdoor living area grows

FIGHT BACK
with the

CoastalMister™

AUTOMATIC MOSQUITO MISTING SYSTEM

Manufactured by:

**COASTAL
MOSQUITO
CONTROL
LLC**

www.coastalmosquito.com

HERE'S HOW IT WORKS

The Coastal Mister™ automatically delivers a fine, exactly measured spray of Pyrethrum-based insecticide through precision nozzles located in specifically designed protection zones throughout your outdoor living areas. Pyrethrum is a water-based, biodegradable material derived from the Chrysanthemum flower and valued for its quick knock-down of mosquitoes and long history of effective use.

- The system is pre-set to mist at times when mosquitoes are most likely to be present and vulnerable.
- Mist occurs one to four times daily for 30 seconds each time.
- Mosquitoes flying or resting in the protection zones are immediately hit with a lethal dose.
- The mist that settles to the ground creates a repellent barrier to keep other mosquitoes away.
- A remote control feature lets you make additional applications as needed.

THE SYSTEM CONSISTS OF

- 30- or 55-gallon poly drum reservoir
- State-of-the-art electric motor and pump
- Electric timer that can start misting cycle by pre-set program, manual override or hand-held remote control
- Natural or black nylon tubing and stainless steel anti drip nozzles

1. Nozzles are installed under the eaves of your home.

2. Hand-held remote control allows you to activate your system from inside at any time.

3. Additional nozzles are placed in trees, landscaping and other likely mosquito breeding and resting sites.

4. Pyrethrum-based insecticide is pumped from a tamper-resistant drum where pre-mixed solution stays fresh and effective.

5. The system can be expanded to protect areas not included in the original installation.

SYSTEM INSTALLATION

THE INSTALLATION PROCESS INCLUDES

- Customer interview and thorough site evaluation to define coverage areas
- Identification and elimination or reduction of breeding and resting sites
- Design of misting system layout for creation of protection zones
- Installation of master unit, tubing and nozzles
- Testing of mist pattern to ensure adequate coverage
- Training on how to effectively and efficiently operate your system

Only specially trained and licensed pest control professionals are qualified to provide system design, installation and activation. Always seek professional assistance for your pest control needs.
